

Stored-Value and Prepaid Debit Cards (DCL GEN 05-16)

A stored-value card is a prepaid debit card that can be used to withdraw cash from an automated teller machine (ATM) or to purchase goods from a merchant. We distinguish a stored-value card from a traditional debit card in this discussion by defining a stored-value card as not being linked to a checking or savings account.

Typically, a school enters into an agreement with a bank under which the bank issues stored-value cards directly to students identified by the school. In a payroll or credit balance transaction, the school electronically transfers funds to the bank on behalf of a student and the bank makes those funds available to the student by increasing the value of the card. Since the funds are transferred from the school's account to the bank, so long as the school cannot recall those funds to pay other charges for the student without the student's written permission, the transaction would be equivalent to paying the funds directly to the student.

Under the following conditions, a school may use stored-value cards as a way to make direct payments to students (such as credit balances and Federal Work Study (FWS) wages).

1. A school must obtain a student's authorization to use a stored-value card for paying credit balances or FWS wages, in the same way a school must obtain authorization before making an electronic funds transfer to a student's checking account.
2. The value of the card must be convertible to cash (e.g., a student must be able to use it at an ATM to make a cash withdrawal). In some cases, the cards are branded with the VISA or MasterCard logo, so the card may also be used to buy goods and services. We would not expect a school to limit the use of the card to specific vendors.
3. A student should not incur any fees for using the card to withdraw the disbursement over a reasonable period of time.

It would appear to be reasonable for an issuing bank to allow ATM withdrawals from it to be free, or to provide several free withdrawals per month. So long as ATMs from the issuing bank are conveniently located for a student, it would also appear to be reasonable for a fee to be charged if the student chooses to use an ATM that is not affiliated with the issuing bank.
4. A student should not be charged by either a school or the affiliated bank for issuing a stored-value card, but it would be reasonable if a student was charged for a replacement card.
5. In order to minimize any risks with disbursing funds to a stored-value card account set up for a student, the account at the bank must be Federal Deposit Insurance Corporation (FDIC) insured. This means that there has to be an individual account for each student that is FDIC insured.
6. In order for the disbursements to the stored-value card to be treated as payments made to a student, a school cannot make any claims against the funds on the card without the written permission of the student, except to correct an error in transferring the funds to the bank under existing banking rules.
7. Since the stored-value card is being set up to disburse Federal Student Aid funds to a student, the account should not be marketed or portrayed as a credit card account and should not be structured to be converted into a credit card at any time after it is issued.

A bank may wish to use its relationship with a student to offer other banking services such as checking accounts, savings accounts, or credit cards, but those should not link to the stored-value card account.
8. A school must inform a student of any terms and conditions associated with accepting and using the stored-value card.
9. A school must ensure that its stored-value card process meets all regulatory time frames. (For example, a student must have access via the card to any credit balance within the 14-day time frames in 34 CFR 668.164, or to any FWS wages at least once per month.)¹
10. A student's access to the funds on the stored-value card should not be conditioned upon the student's continued enrollment, academic status or financial standing with the institution.

1. If a school fails to obtain a student's authorization, the school must have an alternative means of ensuring the student has access to his or her FSA credit balance within the time allowed by regulations, and at no cost to the student.
